**I. Read the passage and answer the questions**

The Turner kids were not accustomed to snow. The most they ever got in their southern city of Birmingham was an inch or so each winter and even that was quite infrequent. What was funny was that even the slightest bit of snowfall was enough to cancel school and close businesses.

No one knew how to drive in the snow. It was never enough for young Lily Turner, though, because the snow that came was always too sparse to build a snowman or to go skiing. But one night, in March of 1993, something magical happened. An unexpected blast of cold air from Canada and moist air from the Caribbean converged on the eastern part of the United States to create the 'Storm of the Century.'

When the Turner kids woke up on Saturday morning, there was 17 inches of unbelievable snow on their front lawn and as far as the eye could see. The Turner parents were in shock. Most folks in town were ill-prepared for such a storm. They had no shovels to dig their way out and no salt to keep from slipping. They had no idea what to do. While the adults seemed paralysed with disbelief, the Turner kids set about having the time of their lives. Lily discovered that a rope tied to a metal trash-can lid made a perfect ski. Rachel made snow angels in every part of the yard. Together, the kids made a huge snowman and dressed it in dad's hat and jacket. For three days, the Turner kids had a splendid time. On Tuesday, the high temperature rose and life for these southerners went back to normal.
